

IN THE CLAIMS

Please amend the claims as follows:

D' 1. (Amended) A method for producing a visual display of a panoramic region from a set of temporally sequential frames of visual data, each frame of visual data representing an image defining a region within the panoramic region such that at least two of the images define regions that do not coincide, the method comprising the steps of:

displaying a series of active images generated from multiple temporally sequential frames of visual data;

positioning each displayed image on a display screen with respect to the position of other displayed images on the display screen in accordance with the spatial relationship in the panoramic region of the content of the displayed image to the content of the other displayed images; and

displaying one or more context images while an active image is displayed, each context image being at least part of an image represented by a frame of the set of temporally sequential frames of visual data.

B2 A 4 cont 23. (Amended) A system for producing a visual display of a panoramic region from a set of temporally sequential frames of visual data, each frame of visual data representing an image defining a region within the panoramic region such that at least two of the images define regions that do not coincide, the system comprising:

means for displaying a series of active images generated from multiple temporally sequential frames of visual data;

means for positioning each displayed image on a display screen with respect to the position of other displayed images on the display screen in accordance with the spatial relationship in the panoramic region of the content of the displayed image to the content of the other displayed images; and

means for displaying one or more context images while an active image is displayed, each context image being at least part of an image represented by a frame of the set of temporally sequential frames of visual data.

24. (Amended) A computer readable storage medium on which is stored one or more computer programs for producing a visual display of a panoramic region from a set of temporally sequential frames of visual data, each frame of visual data representing an image defining a region within the panoramic region such that at least two of the images define regions that do not coincide, the one or more computer programs comprising:

instructions for displaying a series of active images generated from multiple temporally sequential frames of visual data;

instructions for positioning each displayed image on a display screen with respect to the position of other displayed images on the display screen in accordance with
